

One week of FDE that transforms your business with AI

A one-week of FDE integration that transforms your operation. From uncertainty about AI to a team that fully understands it and knows exactly where to apply it.

Forward Deployed Engineer (FDE)

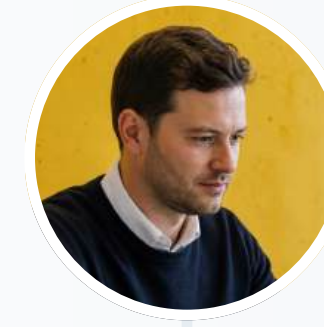

You have people, processes and AI tools. What you don't have is a clear picture of exactly where AI makes a difference in your specific operation.

The answer lies in what your business does every single day. We start from scratch, working inside your real workflows with your real team.

How does AI actually apply to your business?

Most businesses haven't identified exactly where AI fits into their operation. That's the only thing standing between where they are now and measurable returns.

Some teams have a clear list of what's slow, manual and costly. They just don't know which of those AI can solve, what it involves or what it returns.

Why is my competitor delivering the same outcome at a much lower cost?

Why do we feel busy, yet still fall behind?

Other teams feel the friction every day but can't pinpoint it directly. The team is busy. Results don't match the effort. Time and money are going somewhere that's never been properly mapped.

Why is everyone using AI, but nothing moves faster?

Either way, you're asking yourself the same questions.

What is a **Forward Deployed Engineer?**

A Forward Deployed Engineer works embedded in your team for one week, inside your processes, systems and real workflows in order to identify exactly where AI generates measurable impact in your operation.

STEP 1

The diagnostic call

We sit down with your team, map the operation and identify exactly what needs to be looked at. One call. One hour. You leave with a clear plan for what comes next.

STEP 2

Embedded in your team

One of our engineers works embedded inside your operation for a full week, in your real tools and workflows in order to identify where AI generates measurable impact.

STEP 3

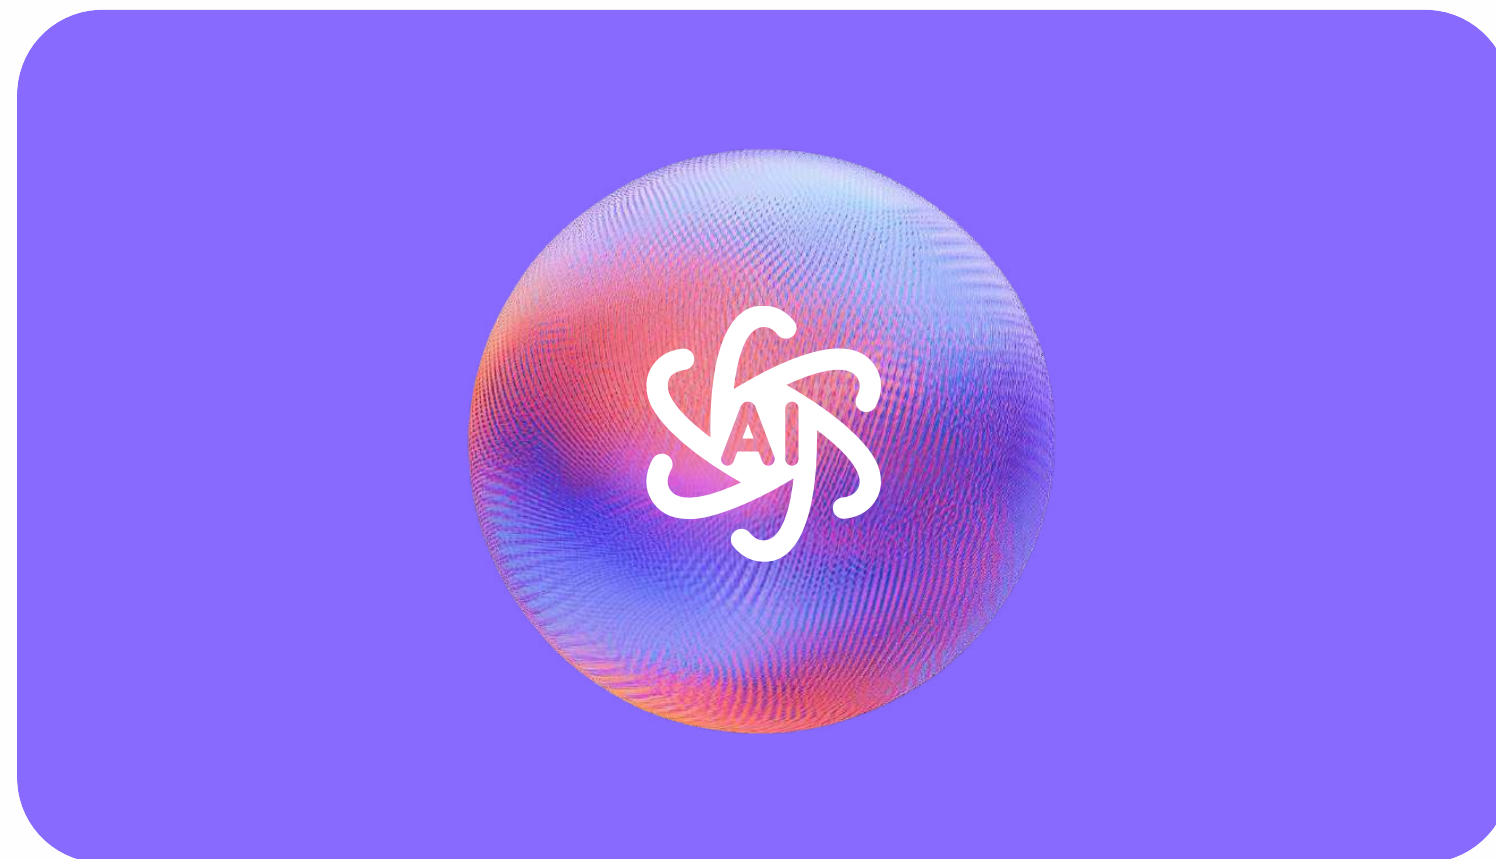

The action report

Within one week of the final session, you receive a complete report mapping every AI opportunity into three clear categories: immediate action, system integration, or custom build. Everything ranked by impact versus effort.

The written report

Every AI opportunity identified in your operation, organised into three clear categories and ranked by impact versus effort. Ready for a leadership-level decision.

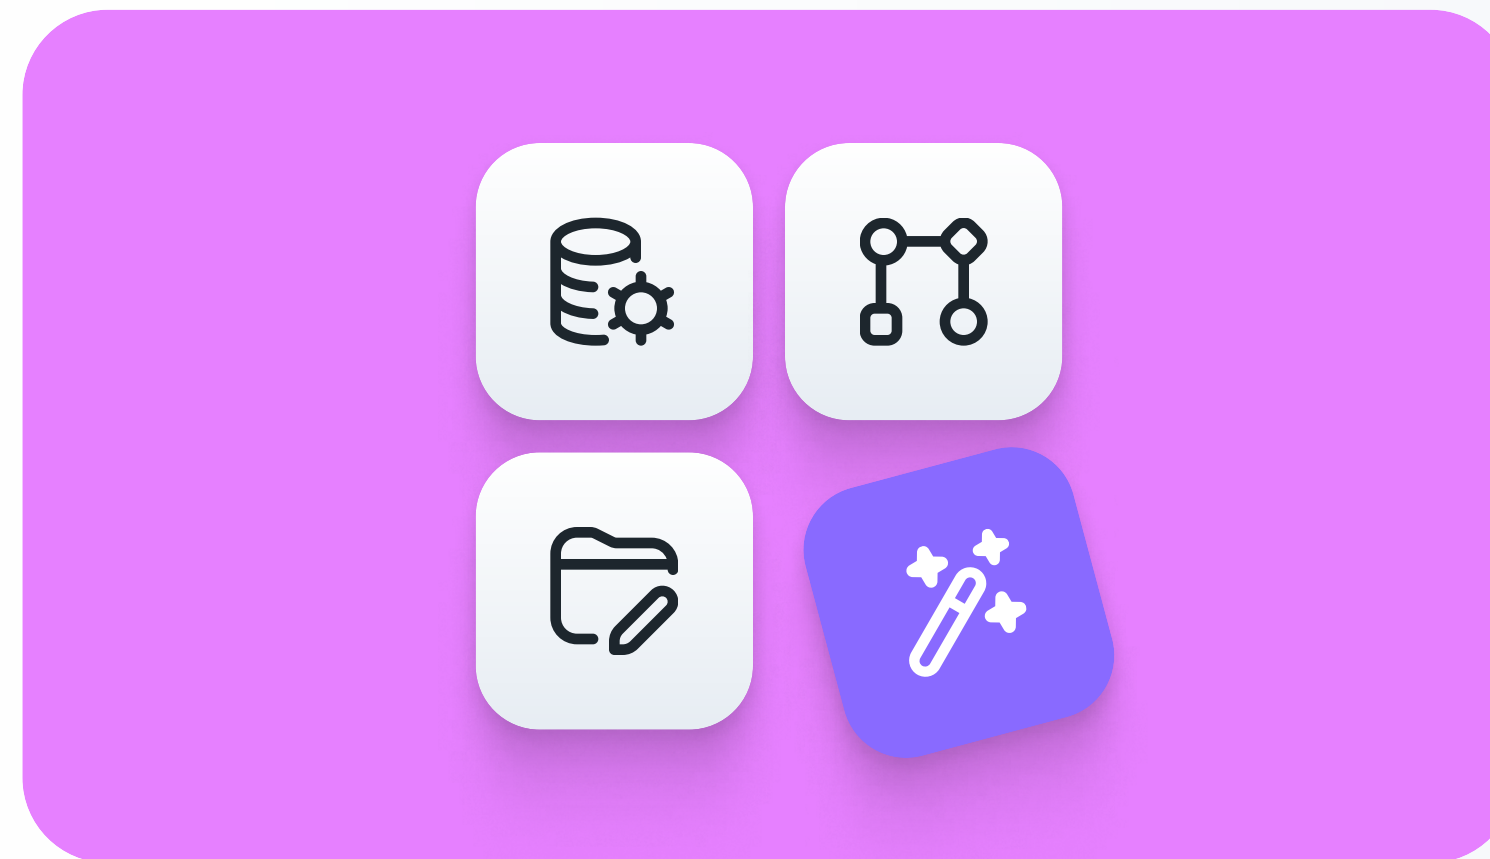

CATEGORY 1

Immediate action

Processes where AI can be applied immediately, with no integration or additional development. Visible impact from the first week.

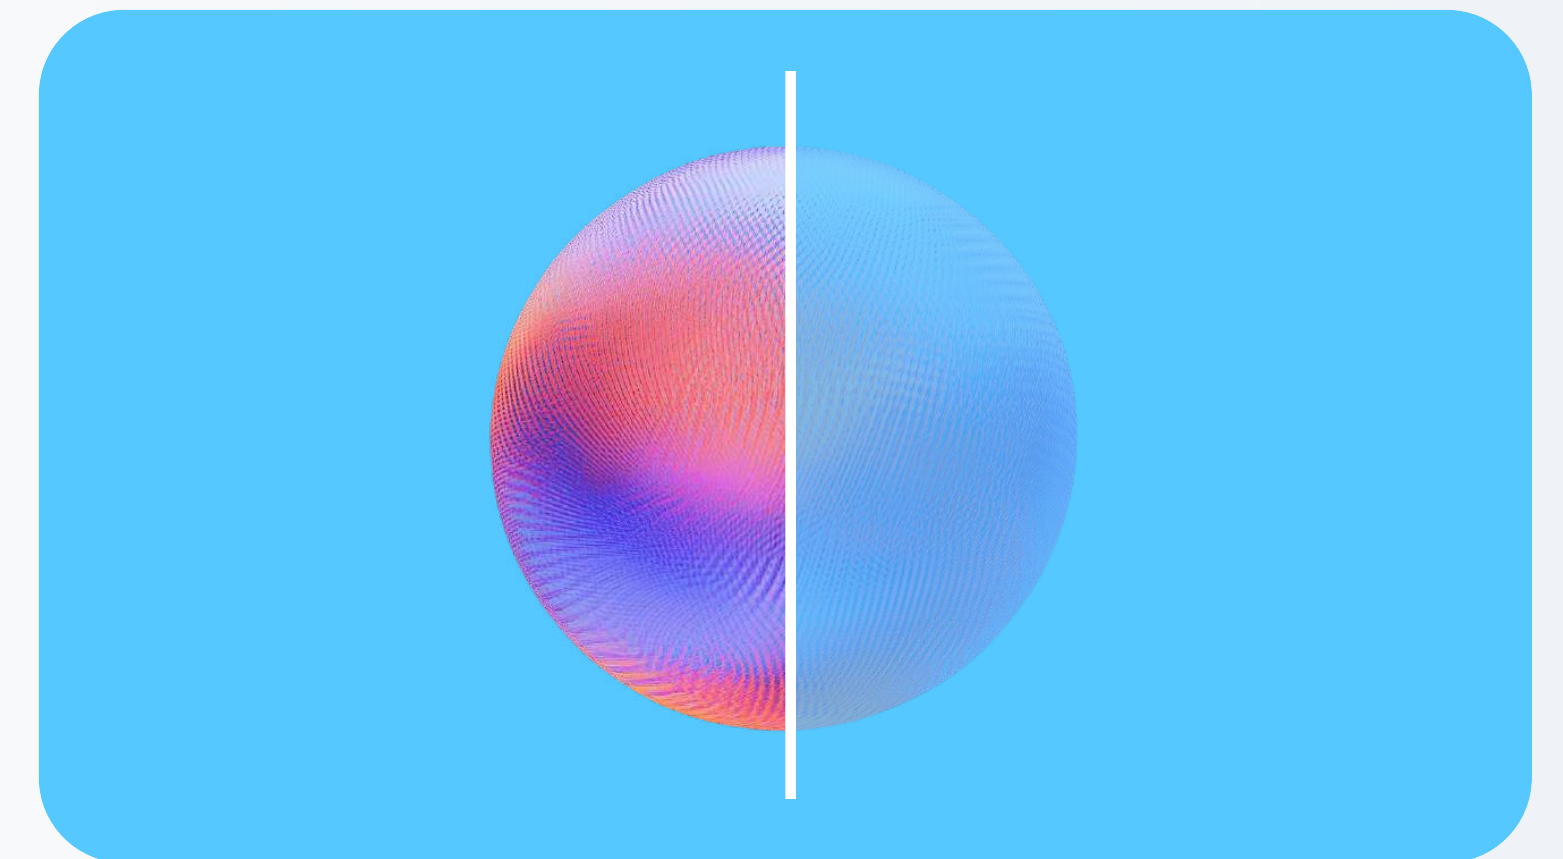

CATEGORY 2

System integration

Opportunities where existing AI tools deliver real value once connected to your specific data and workflows. The tools exist, the connection is what's missing.

CATEGORY 3

Custom build

Areas where the highest return requires a solution built specifically for your operation. Clear scope, precisely defined, no blind commitments.

What an FDE week delivered for **teams** **like yours.**

Invoice approval was slow and inconsistent across departments. One week inside showed us where the errors were coming from. We built an AI that validates invoices automatically against contracts and delivery notes. Fewer errors, faster cycles, less risk.

INVOICE APPROVALS

The sales team was spending hours each week chasing balance confirmations manually. One week inside the operation showed us exactly where the process broke. We built a Balance Sheet Automation that handles it end to end. Administrative time dropped by 80%.

FINANCIAL OPERATIONS

Two separate problems. Both rooted in the same thing, too much manual work slowing down the team. The support team was handling repetitive customer inquiries about orders, products, and deliveries manually. We built an AI chatbot that handles them automatically, 24 hours a day, and escalates to a human agent only when needed. The contracts team was manually filling in B2B contract templates from Excel files; slow, inconsistent, and error-prone. We built a system that reads the Excel data and generates ready-to-sign contract drafts automatically. Two fixes. One team that can now focus on work that actually needs them.

CUSTOMER OPERATIONS

Program Investment

A high-ROI program designed to equip your executive team with practical AI capabilities.

€6,500
Total investment

One week of Forward Deployed Engineer embedded in your operation, completed with a full report of every identified opportunity.

What's included:

Forward Deployed Engineer

Embedded in your operation for one week.

Action Report

Full report mapping every AI opportunity identified.

Let's build the future of your business.
